CUDWORTH URBAN DISTRICT COUNCIL

Divisional Health Office, 33 Queens Road, BARNSLLY.

July, 1961.

ANNUAL REPORT

for the Year ended 31st December, 1960.

To the Chairman and Members of the CUDWORTH URBAN DISTRICT COUNCIL.

Mr. Chairman and Gentlemen,

I have the honour to present to you my fifth Annual Report on the health and social conditions for the year ended 51st December, 1960.

The statistics in respect of your area are still generally favourable, although there was a slight rise in both the death rate and the infant mortality rate. These statistics are based on very small numbers which make the final index hardly significant from the national average.

Progress in immunisation and vaccination continued and Diphtheria immunisation again showed a rise despite the campaign which had been carried out for Poliomyelitis Vaccination. In respect of the latter campaign attention was concentrated rather more on third doses during the current year.

I would like to take this opportunity to thank the Chairman and Members of the Council for the courtesy and many kindnesses they have shown, the Public Health Inspector for his help and co-operation and the staff of the divisional health office for their loyal support.

I am,

Your obedient servant,

R. BARNES.

Medical Officer of Health.

Nott pro	duct of	fa.P	onny R	ato 19	960/61	• • •	• • •		£230

The principal occupations of the inhabitants of the district are coalmining and railway transport.

VITAL STATISTICS

Population

The Registrar General's estimated population at mid 1960 was 8,960 as compared with 8,900 at mid 1959. The natural increase of population showing the increase of births over deaths was 73 as compared with 95 in the previous year.

Live Births						Males	Females	TATOT
Legitimate	• • •	• • •	• • •	• • •	• • •	79	86	165
Illegitimate						4	3	7

The number of live births registered showed a decrease of 2 on the provious year. The Registrar General again supplied a comparability factor which relates the proportion of women in the district of childbearing age with the proportion in a standard population. The crude birth rate multiplied by the comparability factor gives an adjusted rate which is comparable with adjusted birth rates in other districts and with the birth rate for the country as a whole. The adjusted birth rate for your district last year was 18.4 per 1,000 estimated population as compared with 18.9 per 1,000 estimated population in 1958 and with 17.1 per 1,000 estimated population for England and Wales.

I feel that I must make comment on the number of illegitmate births in the district, which during the current year represented just over 4% of the total births.

Stillbirths

4 Stillbirths were notified last year as compared with 3 in 1959. The stillbirth rate was 22.7 per 1,000 total live and stillbirths as compared with 16.9 per 1,000 total births in 1959 and with 19.7 per 1,000 total births for England and Wales.

Doaths

The adjusted death rate which is the crude death rate multiplied by the comparability factor, was 15.1 per 1,000 estimated population as compared with 12.2 per 1,000 estimated population for 1959 and with 11.5 per 1,000 estimated population for England and Wales. There were 99 deaths among the inhabitants of your district during the year as against 79 in the previous year. The principal causes of death in order of numerical importance were: heart and circulatory diseases, cancer and respiratory diseases. Statistics relating to death rates and the causes and ages at death are given in tabular form at the end of the section on vital statistics.

Infant Mortality.

There were 5 infant deaths in your district last year, giving an infant mortality rate of 29.1 per 1,000 hive births as compared with 23.0 per 1,000 live births for the previous year and with 21.7 per.1,000 live births for England and Wales.

The illegitimate infant death rate was Nil.

Peri-natal Mortality

The peri-natal mortality figure showed a substantial rise in 1960

The peri-natal mortality ratio is the number of stillbirths plus the number of deaths occurring in the first week of life per 1,000 total live and stillbirths. The figures for 1960 were 45.5 as compared with .

22.6 in the previous year,

Maternal Mortality

There were no deaths from maternal causes during the year.

INFANT MORTALITY IN 1960

SECTION 11.

GENERAL PROVISION OF THE HEALTH SERVICES IN THE AREA.

Staff

The Medical Officer of Health is a part-time officer of the Council but he is engaged on whole-time Public Health work being also Medical Officer of Health for the surrounding districts and the Divisional Medical Officer of Health for Division No. 25 of the West Riding County Council. One Public Health Inspector is employed by the Council.

General Hospitals

The general hospitals serving your district are given below. Their administration rests with the Leeds and Sheffield Hospital Boards through the local hospital management committees.

Leads Regional Hospital Board:

- 1. Clayton Hospital, Wakefield.
- 2. General Hospital, Wakefield.
- 3. Loods General Infirmary.

Sheffield Regional Hospital Board:

- 1. The United Group Hospitals, Sheffield.
- 2. The Beckett Hospital, Barnsley.
- 3. The St. Helen Hospital, Barnsley.

Infectious Diseases Hospitals

All infectious diseases requiring hospital admission were admitted to the Kendray Hospital, Barnsley. The ambulance arrangements were the same as for the previous year with the hospital retaining its own ambulances for the service.

Maternity Hospitals

Maternity cases were usually admitted to the following hospitals:

St. Helen Hospital, Barnsley.
Pindar Oaks Maternity Home, Barnsley.
Manygates Hospital, Wakefield.
Hallamshire Maternity Home, Chapeltown.

The services of the Jessop Hospital, Sheffield, and the Maternity Hospital, Leeds, were also available for abnormal obstetric cases.

Tuberculosis

Most patients suffering from the disease are admitted to the Wath Wood Sanatorium, and co-operation is maintained with the Chest Physician who holds out-patients' sessions at the Chest Clinic, 46 Church St, Barnsley.

Details of sessions are as follow:

Tuesday,	10.0a.m.	to	12.Onson.	(children)
Wednesday,	10.0a.m.	to	12.Onoon.	
Wednesday,	2.0.p.m.	to	4. Op. m.	
Thursday,	10.0a.m.	O	12.Onoon	(children)
Friday,	10.02.m.	to	12.Onoon.	

Venereal Diseases

The nearest centre for Cudworth patients for the diagnosis and treatment of these diseases is in Barnsley:

Address:

Special Treatment Centre, Queens Road, BARNSLEY.

Other centres are situate at Sheffield, Wakefield and Rotherham and a patient suffering from Venereal Disease is at liberty to attend at the centre of his choice. Treatment is completely confidential.

Infant Welfare Centres.

Infant Welfare Clinics were held at the Aged Pecples Welfare Centre all day Wednesdays.

Ante-Natal Clinics were held in the same premises mainly on Friday mornings but this often extended into the afternoons.

Laboratory Service

The laboratory service was provided by the Public Health Laboratory in Wakefield, a national service under the control of the Medical Research Council. The laboratory is equipped to deal with all bacteriological and pathological examinations, and a complete investigation is undertaken and report furnished for every specimen sent for examination.

Samples of milk taken under the Food and Drugs Act for chemical analysis were examined by the Public Analyst at the expense of the County Council.

Ambulance Service.

The ambulance service is operated by the West Riding County Council.

The depot for your area being at South Kirkby, Talephone No. South Elmsall 291.

SECTION 111

PREVALENCE AND CONTROL OF INFECTIOUS DISEASES

The incidence of notifiable infectious diseases in your district last year amounted to 53 cases as compared with 228 in the previous year. This was largely due to the fall in the notification of Measles where only 2 cases were notified as compared with 195 in the previous year.

Notifiable Diseases other than Tuberculosis	Number notified
Scarlet Fever	23
Measles	2
Whooping Cough	8
Pncumonia	10
Dysentery	5
Ersipolas	3
Meningococcal Infection	1
Puerporal Pyroxia	1

Scarlet Fever

23 notifications were received during the year as compared with 10 in the previous year. There has been a general tendency for this disease to become more permanent in recent years, although it never reaches epidemic proportions and in general, cases remained mild.

Moasles

2 cases of Measles were notified during the year compared with 195 in the previous year.

Smallpox

No cases of Smallpox occurred during the year. 54 babies were vaccinated last year, as compared with 88 in the previous year. This does not represent the fall which at first appears. It has now become common practice not to vaccinate babies until after the age of one year, whereas previously they were vaccinated at approximately six months of age. This scheme was introduced during 1960 and, therefore, for a period of approximately six months very few people were vaccinated, in order that they may attain the age of one year. This change in procedure also makes it impossible to give percentages of children vaccinated as the children may be been in different years.

Diphtheria and Whooping Cough

No cases of Diphtheria were notified during the year. There was again a welcome increase in the number of children immunised against the disease. The figures show that of the children in the age group 0 - 15 years, 86.4% were immunised, consisting of 63% in the 0 - 4 years age group and 97.7% in the 5 - 14 years age group. This is a very satisfactory level of immunity in the population.

8 cases of Thooping Cough occurred during the year as compared with 1 in the previous year. Immunisation against the disease has now been going on for several years and so this year I have decided to express the immunisation state of the pre-school age group (i.e. 0 - 4 years) rather than the individual year. The figure for your district is 63.1% of all children in this age group have received protection.

Poliomyelitis

No case of Poliomyelitis occurred during the year. Immunisation against the disease continued, although the number completed with two doses was considerably less than in the previous year. Concentration of effort was mainly directed towards securing the third doses of those children already immunised with two doses. During the year 107 children, 43 young persons, 60 expectant nothers and 63 adults were immunised with two doses. This brings the total for Cudworth since the beginning of the scheme to 3,310. Consisting of 2,024 children, 837 young persons, 386 expectant methers and 63 other adults. Of this grand total, 1,755 have received a third dose, 966 being completed during 1960.

Tuberculosis

Three cases of Pulmonary Tuberculosis and no case of Non-Pulmonary Tuberculosis were notified during the year, as against Nil and one respectively during 1959. There were no deaths from the disease during the year.

SECTION IV.

REPORT OF THE PUBLIC HEALTH INSPECTOR FOR THE YEAR 1960.

do the Chairman and Members of the Council and to Dr. R. Barnes, Divisional Medical Officer of Health, 33 Queens Road, Barnsley.

Gentlemen.

At the beginning of the year there were 9 outstanding notices from 1959; during 1960, 73 preliminary notices were sent out requiring the execution of works, and 32 of those notices had to be followed up with legal notices. 78 preliminary notices were complied with and 33 legal notices likewise. At the end of 1960, 8 legal notices were carried forward into 1961.

The undermentioned premises received attention by the Public Health Inspector:-

106, 108, 273, 231, 233 Barnsley Road; 5 George Street; 38, 40, 42, 44 Churchfield Avenue; Open space rear of Churchfield Avenue; 40 Churchfield Avenue; 213, 215 Barnsley Road (twice), 145 to 151 Snydale Road; 171 Snydale Road; 2 and 4 Somerset Street; Pinfold Hotel; Central Stores, Darfield Road; 70 Lunn Road; 253 Pontefract Road; Glenhyran, Braemar, Banklands, Yeavering all in Weetshaw Lane; 2, 4, 6, 8, 10 and 12 Churchfield Avenue; 53 Jackson Street; 1, 3, 5, 7, 9, 11, 13 and 15 Albert Street; 62 and 64 York Street; Poplar House, Barnsley Road; 39 Newtown Avenue; Co-op. Meat retailer, Barnsley Road; 1, 3, 5, 7, 9 and 11 Wells Street; 241 Pontefract Rd; 118 Barnsley Road; 7 Eveline Street; 4 Market Place; 165, 167 Srydale Road; 99 Snydale Road; 12 Snydale Road; 207, 209, 211, 213 Snydale Road; 249 Pontefract Road; 1 Somerset Street; 108 Snydale Road; 3/9 Market Place; 165 Barnsley Road; land rear 56 Newland Ave; 25 Summerdale Road; (re-inspection refused); 247 Pontefract Road; 32 Bloemfontein Street (to West Riding Court); 137, 139, 141, 143, 145, 147, 149, 151 Snydale Road; 155 Pontefract Road; Garden Cottages, Pontefwact Road; 22 and 24 Churchfield Terrace; 251 Ponvefract Road; 22 and 24 St. Johns Road; 26 Pontefract Road, 4 Kings Road; 14 Parket Place; 25 Charles Street; 71 Snydale Road; la Clifford Street (to Yest Riding Court); 47 Churchfield Avenue; 63 Snydale Road; Melias Stores; Victoria Hotel; Roberts, Furnisher; Horton, Cycle Dealer: 30, 30, 42, 44 Snydale Road; 17 Newland Avenue; 42 Pontefract Road; 12 Somersot Street.

18 Market Street (from June 1959) reached the West Riding Court in October 1960, the owner having failed to carry out the work in a satisfactory manner.

In addition to the foregoing there were some 1008 visits to Council houses, as instructed by the Housing Committee to enforce intornal decorations and cleanliness. Four cases of neglect were brought to the notice of the Committee. In two of the cases there was long term supervision of the tenants; in one of the cases the tenant refused a re-examination and the Housing Committee failed to enforce its powers; in the fourth case the tenant refused to do any re-decorating until the owner provided the house with a new fixed bath. His wishes having been met, he carried out his own obligations.

DRAINAGE AND SEWERAGE

97.8% of the premises in Cudworth have their drainage systems connected to the public sewerage system (i.e. the system of underground pipes and channels maintained by the Council for conveying foul liquid and solid matters to the sewage works for treatment - "sewage" being the foul liquids and solids so conveyed).

The remaining 2.2% of premises are provided with cesspools (which are dealt with in this report under the heading "Removal of refuse"), or, as in one instance, discharge their foul liquids (6 cottages) on to land belonging to the owner of the houses. By reason of this unsatisfactory feature the houses will be included in the Council's 1960/65 clearance programme, unless they are brought to comply with the House Purchase and Improvement Act 1959. There are also on the outskirts of the Council's district, 6 houses which have no public sewer available for their use, must use cesspools for the reception of foul sink waste water only and have privy-middens as closet accommodation. These also are included in the 1960/65 clearance programme.

During 1960 there was further new house building in Weetshaw Lane and Royston Lane and each house had to be provided with a cesspool for the reception of foul matters. In lower Cudworth new bungalows have been erected, two of them being provided also with cesspools.

During the year complaint was brought to the Public Health Inspector that for some days liquid and solid foul matters were being discharged into the stream which forms the boundary in lower Cudworth. After a three day search the offender was found to be a leaking main sewer and storm overflow chamber, the foul matter being conveyed for some 300 yards by a sub-soil water drain into the stream quoted. The necessary repairs to the main sewer were carried out by the surveyor's maintenance staff and the complaint was thereby rectified.

SANITARY ACCOMMODATION (at December 1960).

The number of houses provided with water closets is 2795 or 99.1% of the district's whole accommodation; there are 59 water closets discharging into 45 cesspools; 6 houses have the use of 5 chemical closets; 3 houses have pail closets and 14 houses share 11 privy middens made up as follows:-

1/2, 3, 4, 5, 6 and 8 Belle Green using 5 chemical closets Storrs Mill Farm, its farm cottage and Ring Farm have 3 pails May Cottage, Common House, 1, 2, 3 and 4 Lawrence Villas and 2, 4, 6, 8, 10, and 12 Weetshaw Lane are served by 9 privy middens.

The privy middens, pail closets and earth closets are a continuing worry to the Council and it is envisaged that the landlords might be persuaded to eventually take advantage of of the House Purchase and Improvement Act 1959 and by way of grant-in-aid provide the five amenities i.e. fixed bath, washhand bowl, foodstore, hot running water and inside w.c.

PUBLIC CLEANSING (supervised by the surveyor)

The 45 cesspools in the district became subject in 1960 to a quarterly mechanical emptying service and during the year the Public Health Inspector was instructed to report upon the result of the emptyings and the structural conditions of the cesspools. House and trade refuse is removed twice in each 8 days. The Council makes an annual charge for the removal of refuse which is strictly "trade refuse".

DISPOSAL OF REFUSE

The site in Weetshaw Lane has continued to be used as the site for the disposal of refuse, with a secondary site in lower Barnsley Road for the reception of dry waste building refuse and the like. No house or trade refuse is deposited there.

During the year the Council commenced to explore the possibility of providing an incincrator on a suitable isolated site for the roduction of combustible waste matter.

WATER SUPPLY

The Council continued to obtain its water supplies from the Council of the Barnsley County Borough and each house in Cudworth's area has a supply laid on inside the house. The number of houses so provided is 2,819.

During the year at the request of the County Medical Officer of Health four samples of water used for drinking and domestic purposes were collected and despatched for examination in relation to the action of the water on lead service pipes. The report upon each sample submitted was "Satisfactory".

MILK SUPPLIES

The year 1960 commenced with the following numbers of milk retailers holding licences to retail milk supplies:-

Barnsley British Co-operative Society Ltd. holding supplementary licences authorising retail sales of tuberculin tested, and ordinary pasteurised milks. Sterilised milk supplementary licences were also issued to the Society.

Northern Dairies (Barnsley) Ltd. also were granted supplementary licences to retail tuberculin tested and pasteurised milk. The Company also delivered pasteurised tuberculin tested, ordinary pasteurised and sterilised milk to a number of shopkeepers who in turn themselves were licensed by the Council to retail milk. 19 shopkeepers were so licensed for the year 1960.

At the end of the year the West Riding County Council became the licensing authority for all types of milk sales throughout its administrative area. From the 1st January 1961 milk licences will operate for a period of 5 years.

SALE OF FOODS

There are two catering establishments, 8 bakehouses and approximately 70 other shop premises retailing foods. All appear to be kept in a cleanly condition and most shops are now provided with cold cabinets or refrigerator cabinets or doop freeze equipment, retailing a wide variety of cooked and uncooked foodstuffs in profusion.

There are 32 shop premises registered for the storage of ice cream for sale all of it pre-packed and nine shop premises are registered for the manufacture of sausages, potted and preserved foods.

MEAT INSPECTION SERVICE (at two private slaughterhouses)

Number of beef animals slaughtered and examined -- 324 Number of pigs slaughtered -- Nil

No records are kept of sheep killings.

In 12 cases of beef slaughterings it was necessary to condemn some part or organ on account of diseases other than tuberculosis.

In 3 cases of beef slaughterings it was necessary to condemn some part or organ affected with bovine tuberculosis. There was a remarkable reduction during 1960 in the incidence of bovine tuberculosis due to a nation-wide supervision of animal health by the Ministry of Agriculture and Fisheries.

All waste sound and unsound slaughterhouse material is collected regularly from slaughterhouses and food shops by a Doncaster offals processor who reduces the collected materials to sterilised fertilisers by the vacuum process.

MOVABLE DWELLINGS

The Council do not view this type of dwelling with favour and do their utmost to continue to keep the district free of caravans. At the time of preparing this report there is only one caravan in the area occupied by a bachelor in an isolated situation and well screened from the nearest highway.

SWIMMING BATHS

The open-air swimming pool in the Park continued to be in seasonal use during the year, especially when the weather is favourable. The water in the pool has the similarity of drinking water in character, and in addition is heated when necessary; it is also processed by continuous filtration, (filtration by sand), chlorination and re-oxygenisation by cascade.

There are no privately-owned swimming pools in the Council's district.

RODENT CONTROL

During the year 29 cases of rodent infestation were dealt with either by the occupiers with free poison baits, or by the Council's rodent operator, Mr. Makings; all the cases appeared to be "minor" ones. There is also continuous poison baiting at the sewage works by the manager Mr. Race. Twice during the year there were two large scale baitings at the Weetshaw Lane refuse disposal site; at each treatment 1 cwt. of poison baits were laid.

HOUSING STATISTICS

Number of houses demolished under confirmed clearance orders	12
Number of families displaced	1
Unfit houses closed voluntarily	1
(No. 11 School Hill).	
Number of back-to-back houses remaining	3
(Storrs Mill farm cottage; 11 School Hill; 56/58 Whitec:	ross Rd.)
Number of "single" houses remaining	3
(No. 8 The Green; Nos. 1 and 3 School Hill)

DIVISIONAL REPORT

Vital Statistics

I have compiled a comparative table of the vital statistics for each of the County districts comprising Division No. 25, which I feel may be of interest to each separate authority in assessing how they stand in relation to the local figures generally.

Births

The number of live births registered in the divisional area in 1960 was 1,296. This is equivalent to a crude birth rate of 16.7 per 1,000. There were 24 stillbirths, giving a stillbirth rate of 18.2.

Doaths

The deaths assigned to the divisional area, after the addition and deduction of inward and outward transfers was 759 giving a crude death rate for the division of 9.8. You will notice in the table that this is lower than any of the other figures given for individual districts, but the other figures show adjusted rates. Unfortunately, no adjusted rate is available for the division.

Infant Mortality

There were 28 infant deaths in the division during the year, of which 21 occurred in the neo-natal period. This gives an infant mortality rate for the division of 21.6 as compared with 19.9 for last year and with 21.7 for England and Wales.

Smallpox Vaccination

In every district except Darfield there has been a marked fall in the number of infants vaccinated. This is an apparent rather than a real decline because of a recent recommendation that instead of this procedure being carried out at six months of age it should be deferred until after one year of age. This means that if the clinic medical officer is to follow this advice no vaccinations will be carried out for a period of between six to twelve months. The number of children vaccinated during the year was 495 compared with 678 in 1959. This change also means that it will not be possible to equate any percentage with the numbers vaccinated. I hope that this change will not lead to a permanent falling off in the demand for vaccination but I have genuine fears in this report.

Whooping Cough and Diphtheria Immunisation

Both those procedures continued to be in demand during the year and the divisional statistics showed an all round improvement. The percentage of children under 15 years immunised against Diphtheria rose from 72.3 to 74% during the year. The pre-school age group rose from 56.4 to 60.2% and the school group rose from 79.9 to 80.6%

Poliomyclitis Vaccination

The com pilation of detailed statistics on poliomyclitis becomes more complicated with each year that goes by. The clerical work associated with keeping these statistics separate for each district in the division is becoming alarming. You will see from the three accompanying tables that much work has been done during the current year, particularly in the giving of third doses. With the introduction of a fourth dose early in 1961, I wonder how much of the annual report may eventually be devoted to this subject. It is very difficult to find percentages of the population immune, but I have calculated these for each district in the group 1943-1960 - (i.e. 6 months to 17 years of age).

CUDWORTH	•••	• • •	• • •	• • •	•••	75.0
DARIFLED	• • •	•••	• • •	•••	• • •	86.3
DARTON	•••	•••	• • •	•••	•••	54.8
DODWORTH	•••	•••	•••	•••	•••	89.1
ROYSTON	• • •	• • •	•••	•••	• • •	67.9
WOMBWELL	• • •	• • •	•••	•••	•••	72.4
Worsbroug	H	•••	•••	• • •	•••	71.7
	DIVI	SION	•••	•••	• • •	73.3

These figures do not include those completed by the National Coal Board for each district. I am not able to separate the school children from the remainder but the percentage immunised in this group is much higher than these figures would indicate.

Midwifery and Haternity Services

The number of cases attended by domiciliary midwives was 670 and during the year there were 649 institutional confinements. These figures compare with 626 and 708 respectively in the provious year. The number of new cases attending anto-natal clinics in the division was 437 and the total number of attendances was 2,828. Post-natal attendances were 265, this figure whows a slight decline compared with 1959.

ANTE-NATAL CLINICS

Attendances at the Ante-Natal Clinic, Old People's Centre,
Sidcop Road, Cudworth, showed a slight decline during the year when
313 women made 1,000 attendances, compared with 282 women who made
1,427 attendances in 1959.

In addition to this, 137 attendances were made at Relaxation Classes run by the midwives. These classes are of the greatest value in giving health education to a mother at a time when she is most receptive.

INFANT WELFARE CLINICS

Most of the infant welfare clinics in the division continued to thrive, and 2,320 new cases attended under the age of 1 year.

The total number of children attending local health authority clinics was 3,018. Total attendances 34,743.

Your local clinic at the Old People's Centre showed a marked decline during the year. 2,503 attendances were made by children under the age of one and 2,005 attendances by children over the age of one, compared with 3,006 and 2,584 respectively in 1959. I feel that perhaps this reflects improved facilities, which are now available in the West Riding area just over your border, where people previously travelled to Cudworth for this service now have facilities in their own division.

SCHOOL HEALTH SERVICE

I am pleased to report that the routine work of school medical inspection is making steady progress towards catching up with the previous back-log caused by Poliomyelitis vaccination. If conditions remain favourable, I think that one more year will see us back on schedule.

Dr. Jackson left the service to take up an appointment at Millom on the 31st July, 1960, and we are pleased to welcome Dr. P. H. Brewin who took up duties on the 26th September, 1960.

The table shows the work carried out by the school health service during the year.

MANTOUX TESTING OF SCHOOL ENTRANTS

This service has continued during the year, and, because the results this year show certain trends, I feel it is worthy of comment. Certain trends become apparent from the table reproduced below. The number of children positive at five years old because of B.C.G. vaccination now becomes a very significant part of the total number of positive reactors (63%). The other change shows that results in the Dodworth Urban District are within normal limits. Five years ago Dodworth had a persistent rate of 20 - 30% against the rest of the division of 2%.

(See Table I).

CHIROPODY SERVICE

During the year a chiropody service has been introduced in every district. This scheme seemed rather slow to start in some districts chiefly due to the non-availability of qualified chiropodists and premises. However, by the end of the year a scheme was functioning in every district giving free treatment to pensioners, physically handicapped and expectant mothers. It might be noted that not a single patient in the last category has so far come forward. At Darfield the Trustees of the Darfield Nurses' Home have continued to run their scheme on an agency basis for the County Council, but in all other districts a direct service under the County Council has been set up.

I give below a table showing the work carried out by the various chiropodists in each area.

(See Table II).

The first reaction to these statistics is that the percentage of people requiring domiciliary treetment is alarmingly high. One of the objects of the scheme is to keep the old people in the community mobile and perhaps we should be able to judge the success of the scheme by the fall which I hope will occur in the number of old people needing treatment at home.

Health Visiting.

The staffing position with regard to health visitors remained relatively unchanged from the previous year. The total number of visits made by the Health Visitors during the year was 34,760, of which 20,879 were made to preschool children. 8,428 visits were made to children under the age of one year.

As in other spheres, Poliomyelitis vaccination took up a great deal of the health visitors' time during 1960, and I feel that the time is fast approaching when we must consider if such routine work could not be done by some lesser qualified person. It is not generally realised that the health visitor is a qualified nurse, a qualified midwife and a further post-graduate certificate in health visiting.

During the year the scheme was commenced to test all babies in a condition known as Phenylketonuria. This is motabolic disturbance which such children are born with. The effect of the disease is to poison the brain and produce mental sub-normality. It is a rare condition; estimates of its incidence vary between 1 in 10,000 and 1 in 40,000 births, but it is the one preventable cause of sub-normality. During the year 847 babies were tested by the Health Visiting Staff, all of whom were negative.

Home Nursing

The home nurses in the division made 47,464 visits last year. 39,655 of these being to medical cases, 6,930 to surgical cases and 680 visits were made to Tuberculosis patients. These figures all show an increase compared with previous years.

Slightly over half of the patients were over 65 and claimed nearly $\frac{3}{4}$ of the visits.

Home Help Service

The home help service again provided a service mainly for the elderly and the proportion of hours expended on this category was 92% of the totals. The total number of households assisted during the year was 729 compared with 663 in the previous year. The total number of hours received by such households was 124,952 compared with 103,941 in 1959. This represents a rise of 20% in the number of hours expended compared with the previous year.

A few years ago, I commented on the fact that we could not go on accommodating more and more cases by cutting the number of hours per case. This limit was reached in 1959 and the ensuing years will inevitably see an expansion of service. I give below a table which shows the changes which have taken place over the years.

District		The second second	of cases	A CONTRACTOR OF THE PARTY OF TH		ge hours per ca 1954 Late 1957

Training Facilities for mentally sub-normal patients

Particulars of sub-normal patients:

Centre	Supervisor			16 years F		
Wombwell Hemsworth Barnsley C.B.		• • • •	9	10 3	4 1 2	6 - 4
			9	13	7	10

At present there are 25 sub-normal children in the Division who are under 16 years of age. Of these, 22 are in full-time attendance at Training Centres. The remaining three, due to physical as well as mental disability, are unable to be catered for at the present time.

At the Wombwell Training Centre there is only provision for 27 pupils and 29 were attending by the end of the year.

I am happy to say that both the plans for a new Adult Training Centre and the extension to The Gables have both been passed and work will be started on them in the near future.

Group Training

For the mentally sub-normal adults who are unable to attend Training Centres, Group Training Classes are held in various parts of the Division. In the case of physical handicap or domestic commitments home visits are made.

The four classes are held in the following districts:

Monday,	9.30a.m. to 4.0.p.m.	Darby and Joan Club, Royston. (Frs. E. Harrott)
Tuesday,	9.30a.m. to 4.0.p.m.	Parish Hall, Wonbwell. (Mrs. E. Harrott)
Thursday,	9.30a.m. to 4.0.p.m.	Ambulance Hall, Worsbrough Bridg (Mrs. E. Harrott)
Friday,	9.30a.m. to 4.0.p.m.	Infant Welfare Contre, Darton. Mrs. E. Harrott)

During the year 3 males and 20 females attended the Group Training Class and 10 females and 3 males were visited by the teacher to give home tuition.

Thanks are due to the Parents' Association who during the year have given financial aid towards a Pantomine Trip to Leeds, and a day's outing at Whitby. Thanks are also due to the National Association, Wombwell Branch, for an excursion to Blackpool to see the lights.

Wembwell Occupation Centre

During the year the Training Centre had 29 pupils on the roll, which was two more than the original establishment.

The following table shows the distribution of the pupils in age groups.

			7 yrs.									
Males	1	1		1	4	-	-	1	-	2.	8-18	<u>C</u> e
Fenales	-	1	1	-	1	-		1		3	3	6

The whole of The Gables is now at the disposal of the Training Centre as the West Riding Dental Department has vacated the three rooms they formerly occupied.

In July we were happy to welcome back Hiss Thornton, who returned from the N. A. M. H. Training Course and has been appointed as an Assistant Supervisor.

Thanks are again due to the Parent Teachers' Association and the Wombwell Rotary and Inner Wheel. The Parents' Association has continued to be active and they have donated to the Centre a small cine screen. The Wombwell Rotary and Inner Wheel organised a five day Whitsuntide holiday for 13 of the mentally sub-normal at Scarborough. The staff and children had their annual day's outing at the end of July, and the N.A.M.H.C. contributed towards a day trip for the children to Belle Vue during the mid-term holiday.

A successful Garden Party organised by the Parents' Association was held in mid July, followed shortly afterwards by the Open Day. Towards the end of the year the children gave a performance of "Robin and the Christmas Tree Fairy" in the Parish Hall. A Christmas party was held at the Training Centre and the Parents' Association donated presents to each child to the value of ten shillings.

Accommodation

During the past year six cases have been admitted to hospital for short-stay accommodation which was appreciated by the parents.

Mental Health After-Care Service
